

# PROJECT1: Jenkins Freestyle Project

Jenkins Freestyle Projects are used to execute some scripts to gather some information or to execute some task.

1. Pull image from docker in power shell: [jenkins/jenkins Tags | Docker Hub](#)

```
PS C:\Users\Shilpi_Harnal> docker pull jenkins/jenkins:latest
```

2. Check image name:

```
PS C:\Users\Shilpi_Harnal> docker images
```

```
-jenkins/jenkins
```

3. 

```
PS C:\Users\Shilpi_Harnal> docker run -dp 8080:8080 jenkins/jenkins:latest
```

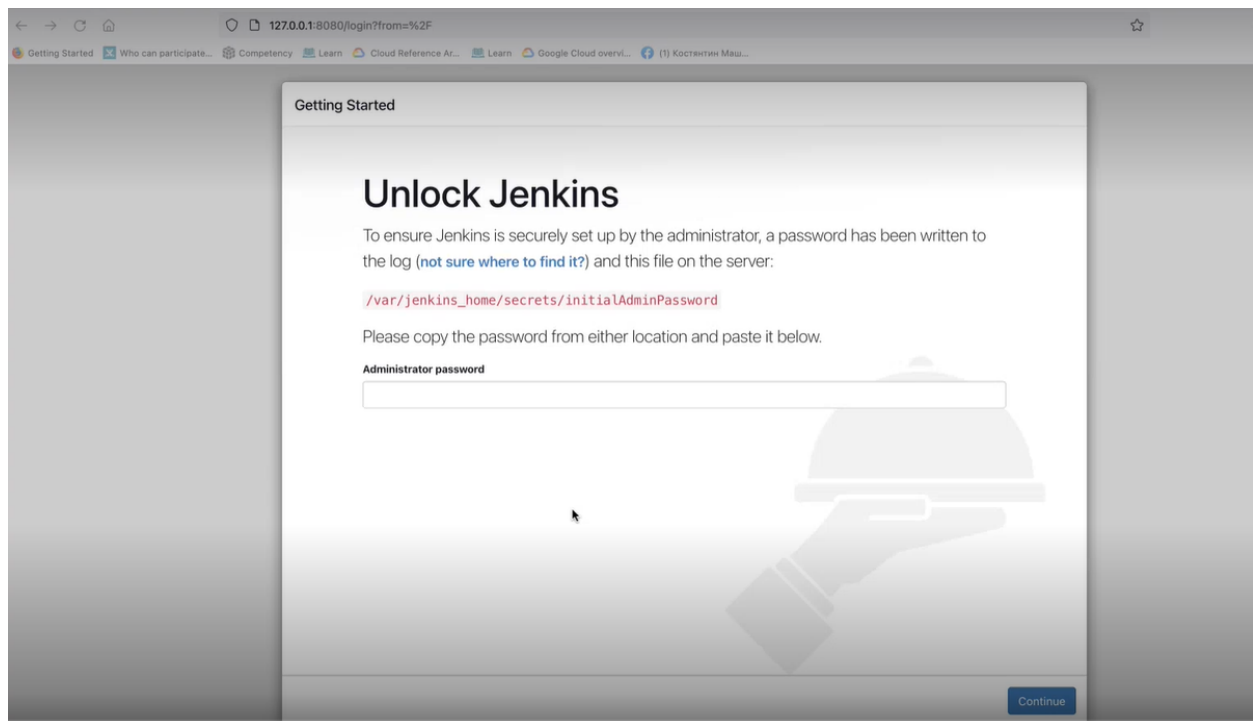

<-some id-->

4. Open browser and run === localhost:8080

It will run the URL: 127.0.0.1/8080

It will prompt for password from: `/var/jenkins_home/secrets/initialAdminPassword`

To access the above file we need to execute a container having jenkins/jenkins image.

5. Check the container id:

```
PS C:\Users\Shilpi_Harnal> docker ps
```

CONTAINER ID	IMAGE	COMMAND	CREATED	STATUS
PORTS	NAMES			

d400148e1240 jenkins/jenkins:latest "/usr/bin/tini -- /u..." About an hour ago Up About an hour 0.0.0.0:8080->8080/tcp, 50000/tcp upbeat\_darwin

6. Execute container with id:

```
PS C:\Users\Shilpi_Harnal> docker exec -it d400148e1240 bash
```

7. New prompt. Check list of files

```
jenkins@d400148e1240:/$ ls
```

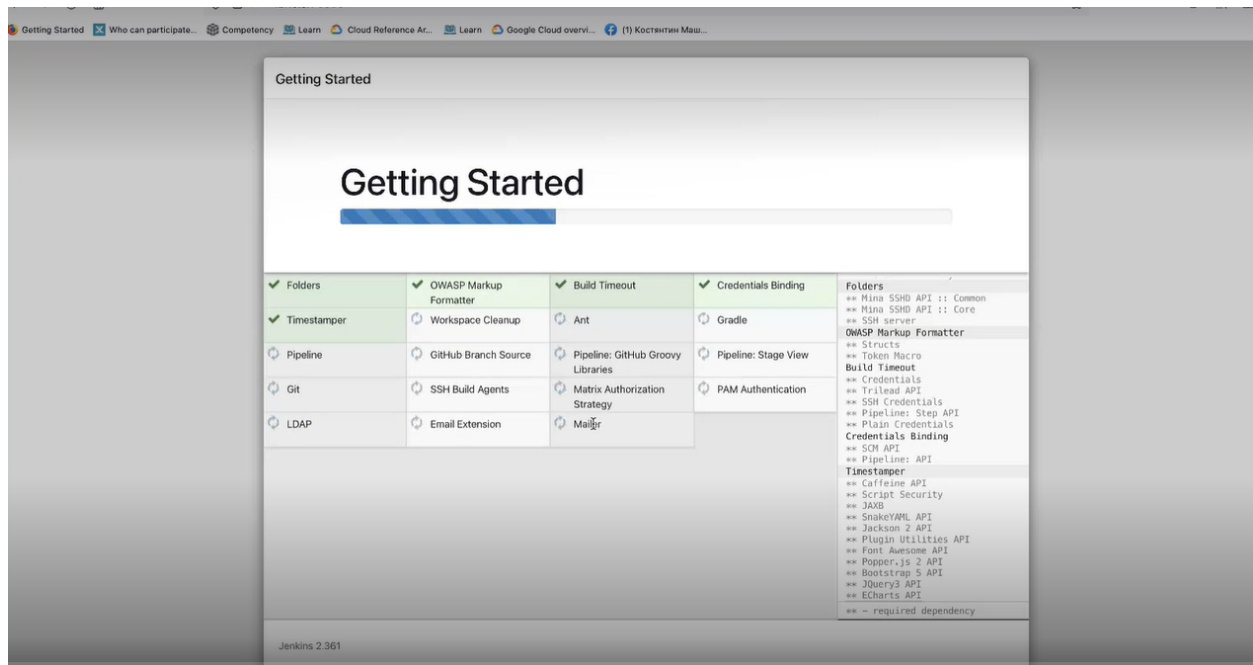

```
bin boot dev etc home lib lib64 media mnt opt proc root run sbin srv sys tmp usr var
```

8. Reference to point No. 4, extract password from:

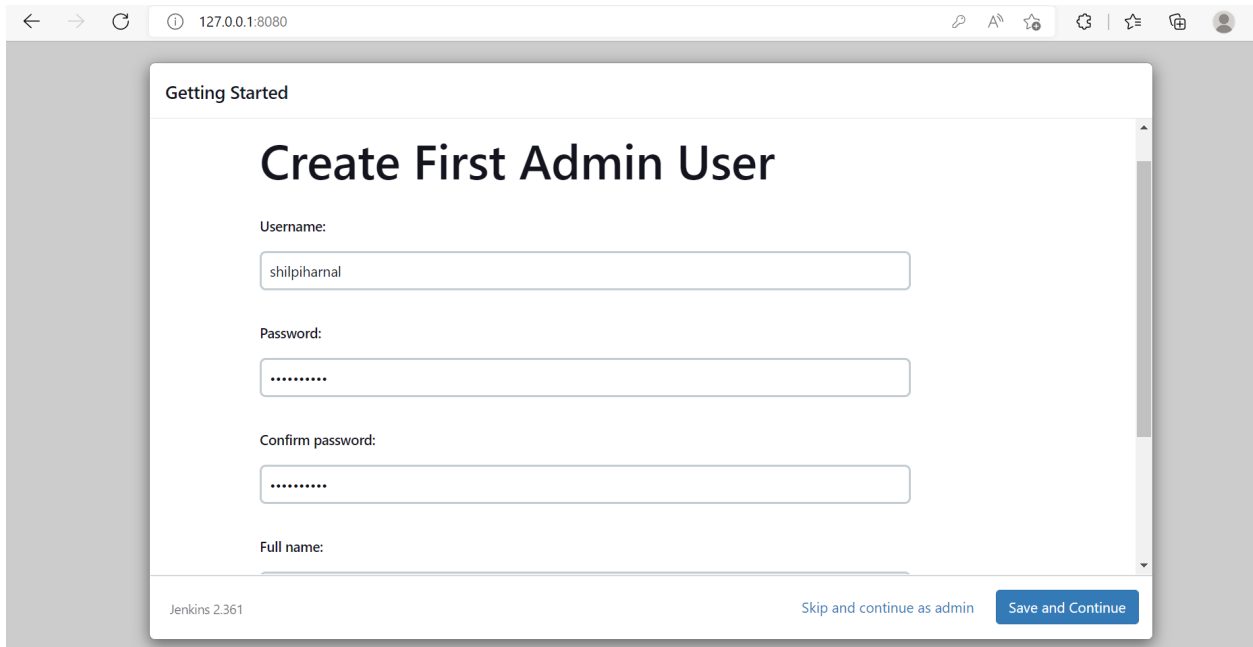

```
/var/jenkins_home/secrets/initialAdminPassword
```

```
jenkins@d400148e1240:/$ cat /var/jenkins_home/secrets/initialAdminPassword
4c58a23ad96441ae800b3eb78583f3b3
```

9. Reference to point No. 4, Go back to browser and enter password and click continue. It will start building setup that would take some time:

## 10. Create Admin User:

A screenshot of a web browser window showing the Jenkins 'Getting Started' page. The main heading is 'Create First Admin User'. Below it are four input fields: 'Username:' with the value 'shilpihamal', 'Password:' with masked characters, 'Confirm password:' with masked characters, and 'Full name:'. At the bottom left, it says 'Jenkins 2.361'. At the bottom right, there are two buttons: 'Skip and continue as admin' and 'Save and Continue'.

Getting Started

# Create First Admin User

Username:

Password:

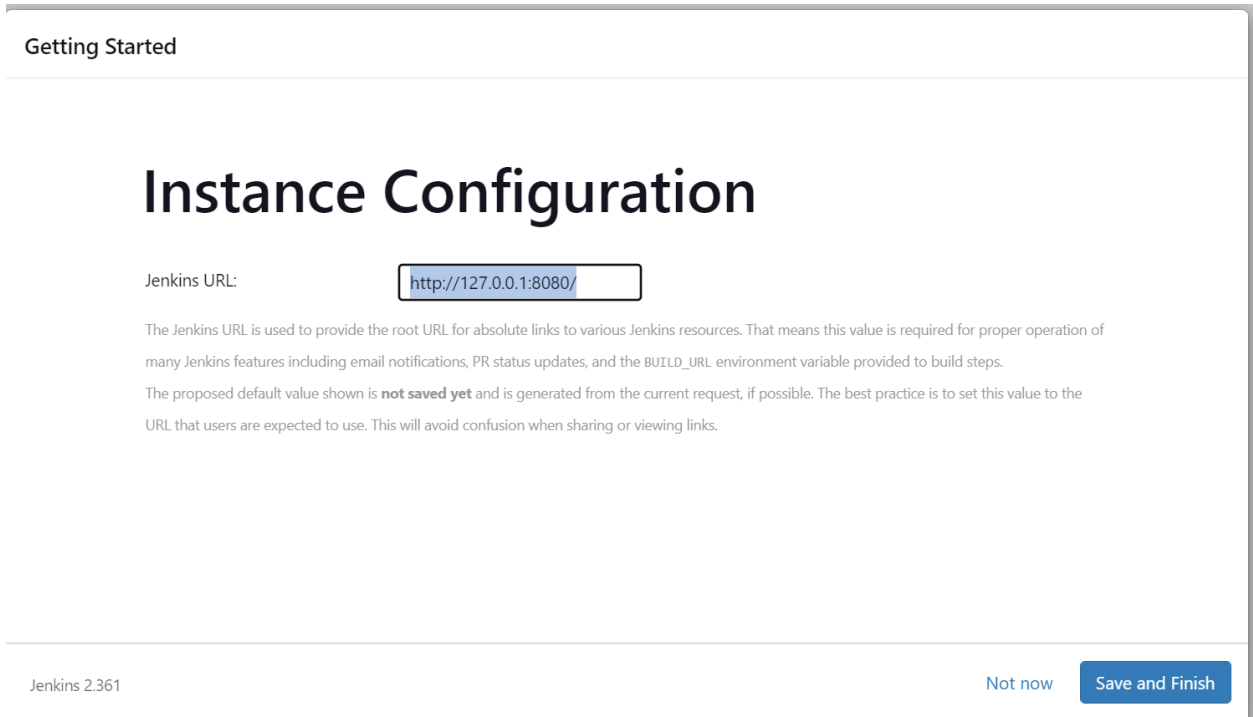

Confirm password:

Full name:

Jenkins 2.361

[Skip and continue as admin](#) [Save and Continue](#)

## 11. Click Save and finish. Or you can also give any other url :

A screenshot of the Jenkins 'Instance Configuration' page. The heading is 'Instance Configuration'. Below it is a 'Jenkins URL:' label followed by a text input field containing 'http://127.0.0.1:8080/'. Below the input field is a paragraph of text explaining the Jenkins URL. At the bottom left, it says 'Jenkins 2.361'. At the bottom right, there are two buttons: 'Not now' and 'Save and Finish'.

Getting Started

# Instance Configuration

Jenkins URL:

The Jenkins URL is used to provide the root URL for absolute links to various Jenkins resources. That means this value is required for proper operation of many Jenkins features including email notifications, PR status updates, and the `BUILD_URL` environment variable provided to build steps.

The proposed default value shown is **not saved yet** and is generated from the current request, if possible. The best practice is to set this value to the URL that users are expected to use. This will avoid confusion when sharing or viewing links.

Jenkins 2.361

[Not now](#) [Save and Finish](#)

## 12. Click - start using Jenkins

### Getting Started

# Jenkins is ready!

Your Jenkins setup is complete.

Start using Jenkins

Jenkins 2.361

## 13. Jenkins Dashboard:

The screenshot shows the Jenkins Dashboard in a web browser. The address bar displays the URL `127.0.0.1:8080`. The Jenkins logo and name are in the top left of the dashboard header. A search bar with the text "Search (CTRL+K)" is in the top right. The user "Shilpi Harnal" is logged in, with a "log out" link next to their name. The dashboard is divided into several sections:

- Left Sidebar:** Contains links for "New Item", "People", "Build History", "Manage Jenkins", and "My Views". Below these are two expandable sections: "Build Queue" (showing "No builds in the queue.") and "Build Executor Status" (showing two "idle" executors).
- Main Content Area:**
  - Welcome to Jenkins!** A message stating: "This page is where your Jenkins jobs will be displayed. To get started, you can set up distributed builds or start building a software project."
  - Start building your software project** A section with a "Create a job" button.
  - Set up a distributed build** A section with three buttons: "Set up an agent", "Configure a cloud", and "Learn more about distributed builds".

The footer of the dashboard shows "REST API" and "Jenkins 2.361".

## 14. To check existing Users:

### Manage Jenkins -> Manage Users

The screenshot shows the Jenkins 'Manage Users' interface. The breadcrumb trail is 'Dashboard > Manage Jenkins > Jenkins' own user database'. The left sidebar contains links: 'Back to Dashboard', 'Manage Jenkins', 'Users' (selected), and 'Create User'. The main content area is titled 'Users' and includes a description: 'These users can log into Jenkins. This is a sub set of [this list](#), which also contains auto-created users who really just made some commits on some projects and have no direct Jenkins access.' Below this is a table with two columns: 'User ID' and 'Name'. One user is listed: 'shilpiharmal' (User ID) and 'Shilpi Harmal' (Name). There is a gear icon next to the user name.

## 15. Manage Jenkins -> Configure Global Security

Enable following and click SAVE to save settings:

CSRF Protection

Crumb Issuer

Default Crumb Issuer

☒ Enable proxy compatibility ?

## 16. Manage Jenkins -> Configure System

Write a message and save.

The screenshot shows the Jenkins 'Configure System' page. The breadcrumb trail is 'Dashboard > Manage Jenkins > Configure System'. The left sidebar contains links: 'New Item', 'People', 'Build History', 'Manage Jenkins', and 'My Views'. The main content area is titled 'Configure System'. It has a section for 'Home directory' with a help icon and a description: 'By default, Jenkins stores all of its data in this directory on the file system'. The value is '/var/jenkins\_home'. Below this is a box with instructions on how to change the Jenkins home directory. There is a 'System Message' section with a description: 'This message will be displayed at the top of the Jenkins main page. This can be useful for posting notifications to your users'. The message text is 'Hello! Techies!'. At the bottom, there are 'Save' and 'Apply' buttons. A red arrow points to the 'Save' button.

## 17. Next Screen:

Install without restart Download now and install after restart Update information obtained: 4 hr 19 min ago Check now

24. Give a **NAME**, select **FREESTYLE PROJECT** and click **OK**.

The screenshot shows the Jenkins 'Enter an item name' dialog. At the top, there is a text input field containing the word 'First', which is highlighted in yellow. To the right of the field, a red arrow points to it with the handwritten text 'give a project name'. Below the field, a red error message states: 'This field cannot be empty, please enter a valid name'. Below the input field, there is a list of project types, each with an icon and a description. The 'Freestyle project' option is circled in red, with a red arrow pointing to it and the handwritten text 'select it'. The 'Folder' option is also circled in red, with a red arrow pointing to it and the handwritten text 'To put jobs'. The 'Multibranch Pipeline' option has a red arrow pointing to it with the handwritten text 'for branch'. At the bottom of the dialog, there is a blue 'OK' button, which is circled in blue, with a blue arrow pointing to it and the handwritten text 'click'. The other project types listed are 'Pipeline' and 'Multi-configuration project'.

Enter an item name

**First**

← give a project name

→ This field cannot be empty, please enter a valid name

**Freestyle project** ← select it

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

**Pipeline**

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

**Multi-configuration project**

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

**Folder** ← To put jobs

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

**Multibranch Pipeline** ← for branch

Creates a set of Pipeline projects according to detected branches in one SCM repository.

**Organization Folder**

Creates a set of multibranch project subfolders by scanning for repositories.

**OK** ← click

25. Add some description

## General

Description

My first freestyle project.

26. Select EXECUTE SHELL and add some script to run as:

#### Build Steps

**Add build step ^**

Filter

- Execute Windows batch command
- Execute shell**
- Invoke Ant
- Invoke Gradle script
- Invoke top-level Maven targets
- Run with timeout
- Set build status to "pending" on GitHub commit

27. add some script to run as:

```
pwd  
ls -la  
uname -a  
cat /etc/*release*
```

#### Build Steps

**Execute shell** ?

Command

See [the list of available environment variables](#)

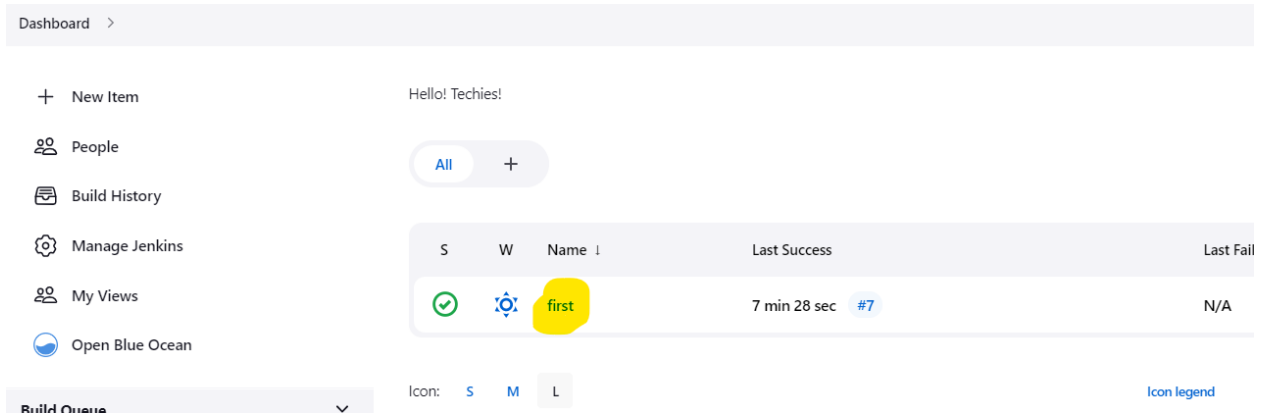

```
pwd  
ls -la  
uname -a  
cat /etc/*release*
```

**Advanced...**

**Add build step v**

**Save** **Apply**

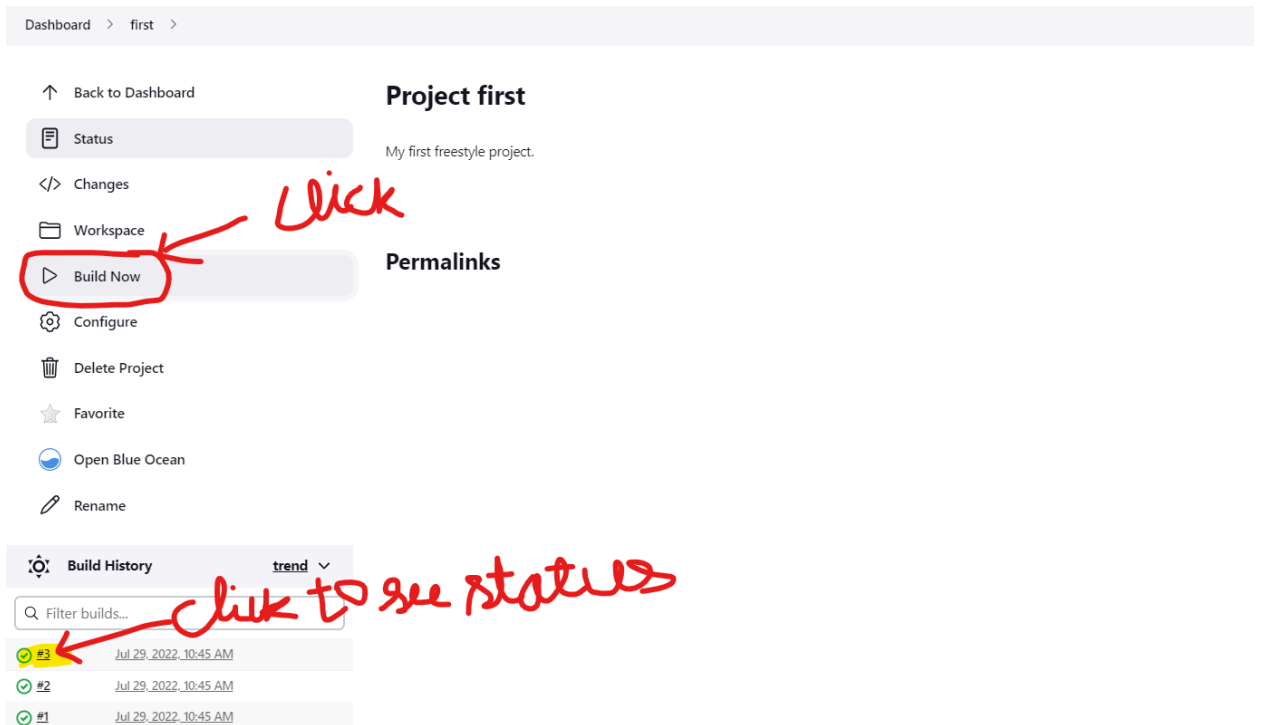

28. Back to DASHBOARD to see your created Project named as **first**.  
Click on project name: **first**

The screenshot shows the Jenkins Dashboard. On the left is a sidebar with navigation links: New Item, People, Build History, Manage Jenkins, My Views, and Open Blue Ocean. The main area displays a table of projects. The project named 'first' is highlighted with a yellow circle. Below the table, there is a 'Build Queue' section and an 'Icon legend'.

S	W	Name ↓	Last Success	Last Fail
✓	⚙️	first	7 min 28 sec #7	N/A

Click : **BUILD NOW**

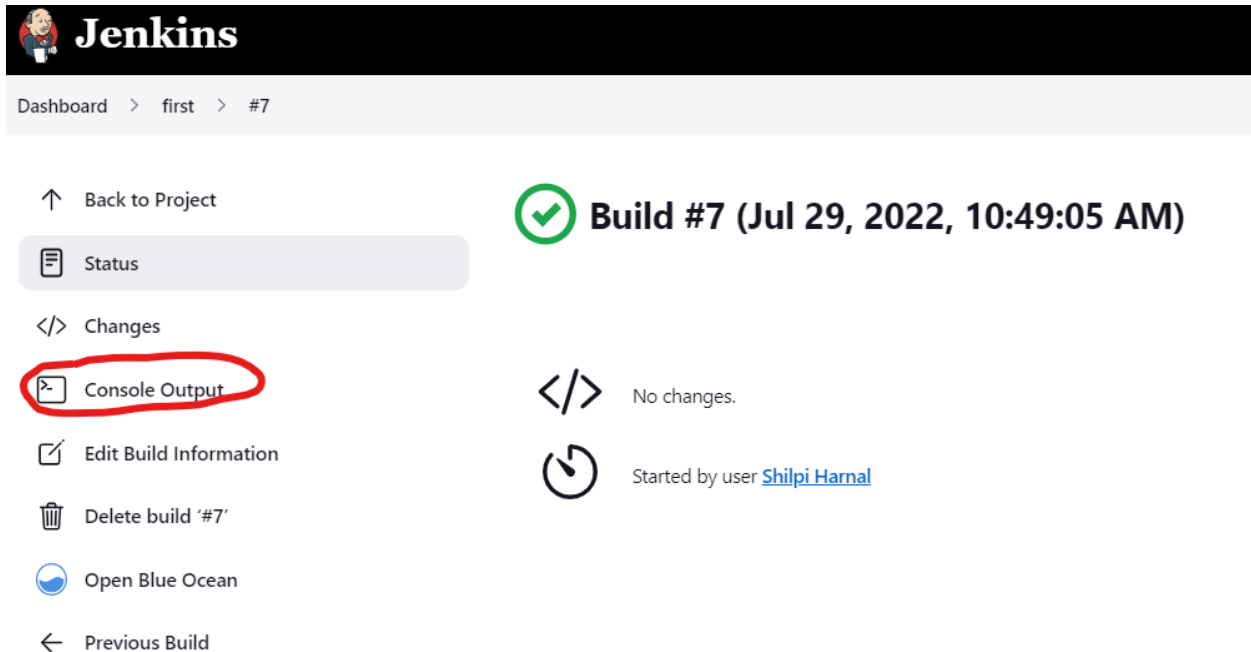

The screenshot shows the Jenkins project page for 'first'. The left sidebar contains links: Back to Dashboard, Status, Changes, Workspace, Build Now (highlighted with a red circle and a red arrow pointing to it with the handwritten text 'Click'), Configure, Delete Project, Favorite, Open Blue Ocean, and Rename. The main area shows the project name 'Project first' and a description 'My first freestyle project.' Below this is a 'Permalinks' section. At the bottom, the 'Build History' section is visible, showing a list of builds. The first build, #3, is highlighted with a yellow circle and a red arrow pointing to it with the handwritten text 'click to see status'.

**Build History**

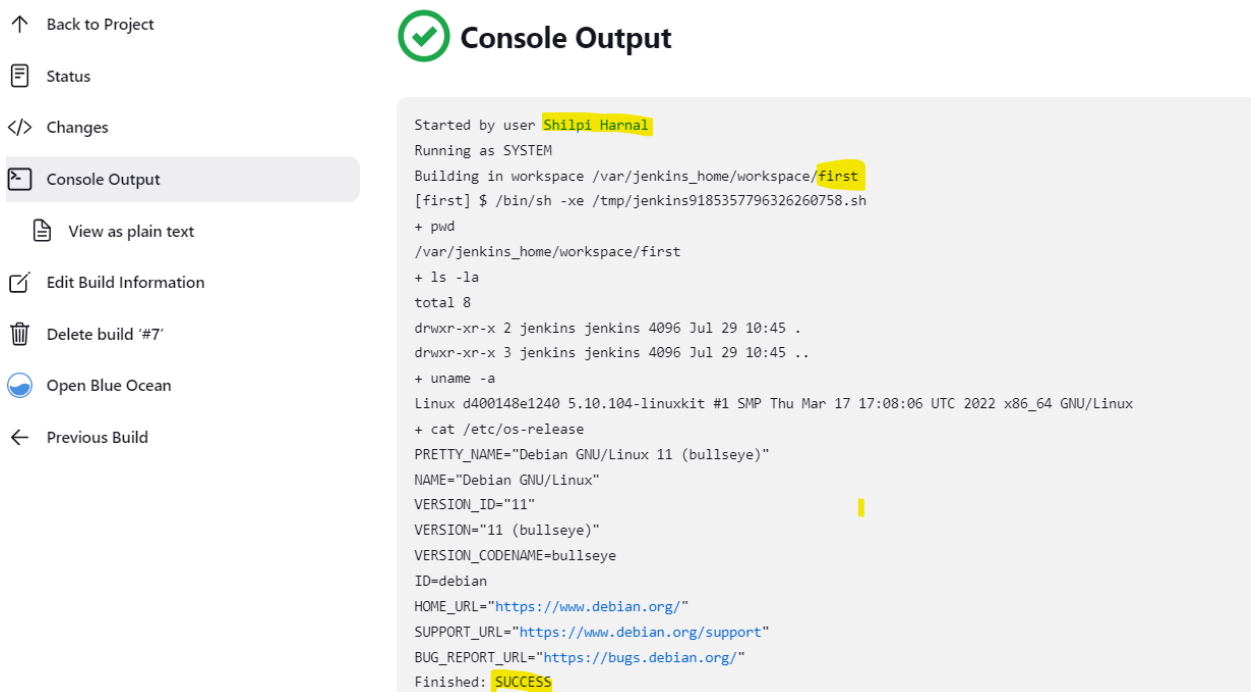

Build	Status	Timestamp
#3	✓	Jul 29, 2022, 10:45 AM
#2	✓	Jul 29, 2022, 10:45 AM
#1	✓	Jul 29, 2022, 10:45 AM

29. Click on any task. Here Build #7 indicates the number of times you have build the project.

The Jenkins dashboard for project 'first' shows Build #7. The left sidebar contains links: 'Back to Project', 'Status', 'Changes', 'Console Output' (highlighted with a red circle), 'Edit Build Information', 'Delete build '#7'', 'Open Blue Ocean', and 'Previous Build'. The main area displays a green checkmark icon, the title 'Build #7 (Jul 29, 2022, 10:49:05 AM)', and status information: 'No changes.' and 'Started by user Shilpi Harnal'.

30. Click console output:

The Jenkins console output for Build #7 is displayed. The left sidebar shows the same navigation links as the previous screen, with 'Console Output' selected. The main area shows a green checkmark icon and the title 'Console Output'. The output text is as follows:

```
Started by user Shilpi Harnal
Running as SYSTEM
Building in workspace /var/jenkins_home/workspace/first

☐ Build periodically ?

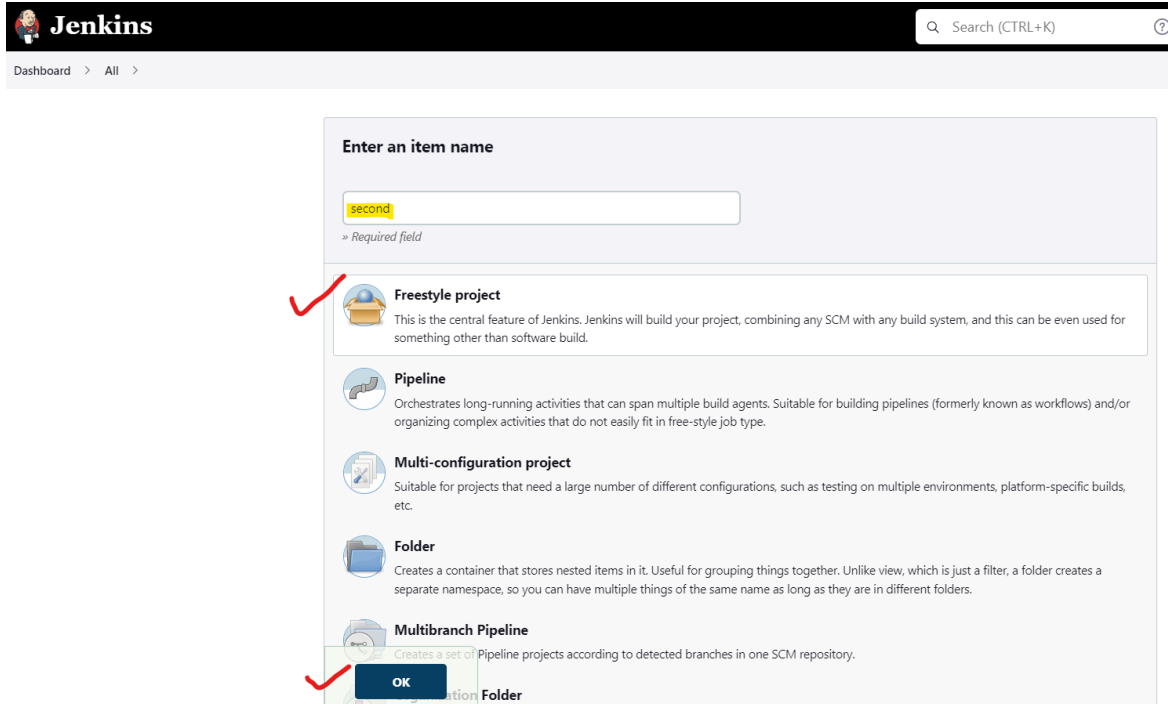

☐ GitHub hook trigger for GITScm polling ?

☐ Poll SCM ?

Build Environment

Lets create another Jenkins Freestyle Project as **second** that will be executed as a trigger after the earlier created project: **first** is executed.

45. Go to DASHBOARD, click NEW ITEM, and add a new project as **second**:

The screenshot shows the Jenkins Dashboard with the 'NEW ITEM' button highlighted. The 'Enter an item name' field contains the text 'second'. Below the input field, a list of project types is displayed: Freestyle project, Pipeline, Multi-configuration project, Folder, and Multibranch Pipeline. The 'Freestyle project' option is selected, indicated by a red checkmark. The 'OK' button is also highlighted with a red checkmark.

Enter an item name

second

» Required field

- Freestyle project**  
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.
- Pipeline**  
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**  
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
- Multibranch Pipeline**  
Creates a set of Pipeline projects according to detected branches in one SCM repository.

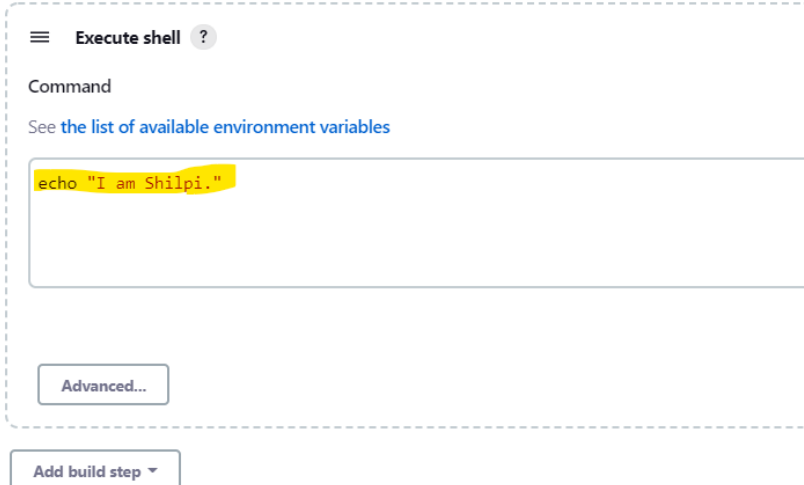

OK

46. Add some script:

## Configuration

- General
- Source Code Management
- Build Triggers
- Build Environment
- Build Steps**
- Post-build Actions

### Build Steps

The screenshot shows the 'Build Steps' configuration page. The 'Execute shell' step is selected. The 'Command' field contains the text 'echo "I am Shilpi."'. The 'Advanced...' button is visible below the command field. The 'Add build step' button is at the bottom.

Execute shell ?

Command

See [the list of available environment variables](#)

echo "I am Shilpi."

Advanced...

Add build step ▾

47. Add a trigger to execute it after **first** project and SAVE.

Dashboard > second >

### Configuration

- General
- Source Code Management**
- Build Triggers
- Build Environment
- Build Steps
- Post-build Actions

#### Source Code Management

☒ None

☐ Git ?

#### Build Triggers

☐ Trigger builds remotely (e.g., from scripts) ?

☒ **Build after other projects are built** ?

Projects to watch

**first**

☒ Trigger only if build is stable

☐ Trigger even if the build is unstable

☐ Trigger even if the build fails

☐ Always trigger, even if the build is aborted

48. Now go back to the dashboard and build the **first** project again and it will automatically trigger the **second** project.

+ echo I am Shilpi.
I am Shilpi.
Finished: SUCCESS
```

# PROJECT2: Jenkins Pipeline

## Jenkins Pipeline Projects are used for CI/CD.

1. Add a new pipeline project as first\_pipeline. Click save.

Dashboard > All >

Enter an item name

» Required field

**Freestyle project**

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

**Pipeline**

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and organizing complex activities that do not easily fit in free-style job type.

**Multi-configuration project**

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

**Folder**

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

**Multibranch Pipeline**

Creates a set of Pipeline projects according to detected branches in one SCM repository.

**Configuration Folder**

OK

2. Add some description.

Dashboard > first\_pipeline >

### Configuration

❓ Declarative Online Documentation

❓ Steps Reference

❓ Global Variables Reference

❓ Online Documentation

❓ Examples Reference

❓ IntelliJ IDEA GDSDL

This **Snippet Generator** will help you learn the Pipeline Script code which can be used to define various Pipeline Script statements that would call the step with that configuration. You may copy and paste the code as is or omit the values that can be omitted in your script, leaving them at default values.)

### Steps

#### Sample Step

approveReceivedEvent: Updates an Approve event in Elasticsearch

approveReceivedEvent: Updates an Approve event in Elasticsearch

approveRequestedEvent: Creates an Approve requested event in Elasticsearch

archiveArtifacts: Archive the artifacts

bat: Windows Batch Script

**build: Build a job**

catchError: Catch error and set build result to failure

checkout: Check out from version control

11. Select project name to build, that is **first** in this case. Now click **Generate Pipeline Script** to check and copy the command to be added to build **first** project, i.e. **build 'first'**:

Sample Step

build: Build a job

build ?

Project to Build ?

first

❗ No such job first

☒ Wait for completion ?

☒ Propagate errors ?

Quiet period ?

Parameters ?

first is not parameterized

Generate Pipeline Script

build 'first'

12. Go to previous tab where we had first\_pipeline script and add a new stage to build **first** project as:

```
stage('Invoke and build: first'){  
    steps {  
        build 'first'  
    }  
}
```

Script ?

```
1 pipeline {  
2     agent any  
3  
4     stages {  
5         stage('Hello') {  
6             steps {  
7                 echo 'Hello World! This is Shilpi'  
8             }  
9         }  
10        stage('Invoke and build: first'){  
11            steps {  
12                build 'first'  
13            }  
14        }  
15    }  
16 }  
17
```

☒ Use Groovy Sandbox ?

Pipeline Syntax

Save

Apply

13. Click **Save** and build the **first\_pipeline** project again. That in turn builds **first** and that will build **second**.

```

O/P of first\_pipeline

build of first

15. You can go back to Dashboard and check the status of the first project pipeline that has also been executed and the second project pipeline triggered by the first.

16. Go back and Lets configure pipeline again to add some delay with sleep command as:

## Configuration

### Pipeline

General

Advanced Project Options

Pipeline

### Definition

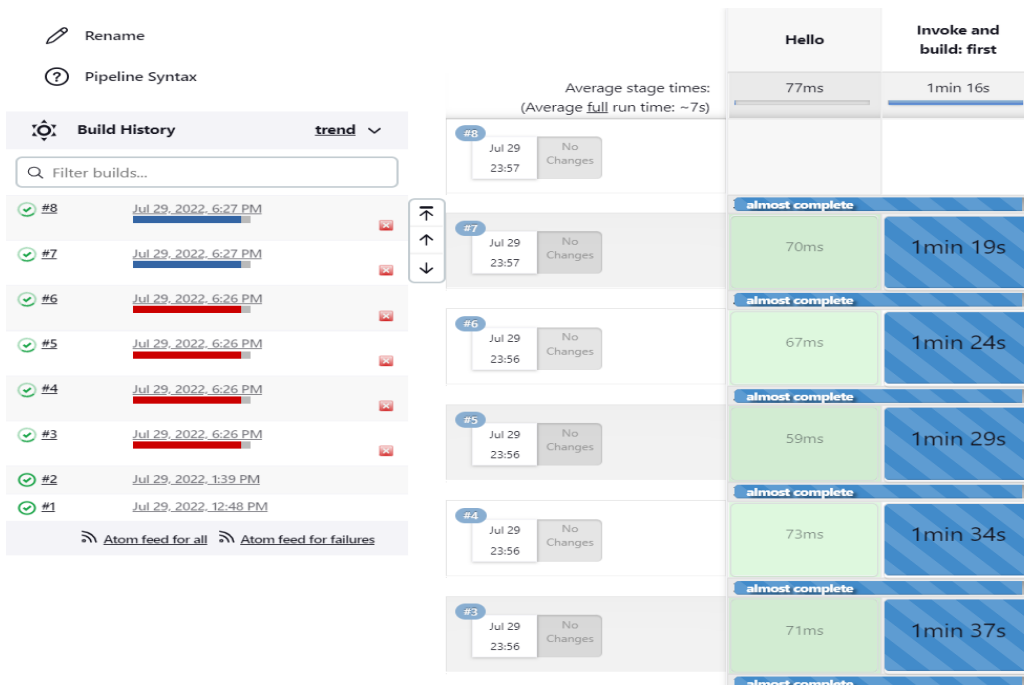

Pipeline script

Script ?

```
1 pipeline {
2   agent any
3
4   stages {
5     stage('Hello') {
6       steps {
7         echo 'Hello World! This is Shilpi'
8       }
9     }
10    stage('Invoke and build: first'){
11      steps {
12        build 'first'
13        sleep 100
14      }
15    }
16  }
17 }
18 }
```

☒ Use Groovy Sandbox ?

17. After SAVE build the pipeline again. This time it will be running with delay. Try to build multiple pipelines with multiple clicks parallelly as:

18. But it will only execute 5 pipelines at a time because of jenkins general settings as done earlier from MANAGE JENKINS. If required, you can change the settings to a higher number.

# PROJECT3: Jenkins Pipeline

1. Add a new pipeline project as second\_pipeline. Click save.

**Enter an item name**

second\_pipeline

» Required field

---

 **Freestyle project**  
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

---

 **Pipeline**  
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

---

 **Multi-configuration project**  
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

---

 **Folder**  
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

---

 **Multibranch Pipeline**  
Creates a separate Pipeline projects according to detected branches in one SCM repository.

**OK**

2. This time, build pipeline from SCM instead of script by selecting **Pipeline script from SCM**. This means building a pipeline from git-link.

## Pipeline

### Definition

Pipeline script from SCM

Pipeline script

Pipeline script from SCM

3. Select Definition: **Pipeline script from SCM** and SCM: **Git**  
Paste Repository URL: <https://github.com/ATolkachev/epam-ci-cd-app.git>  
And **SAVE**
